

# It's time for your child's next shot...

If you don't already have an appointment,  
call your child's doctor today.

If you have any questions, call  
San Francisco Health Plan at **1(800) 288-5555.**

## Why Are Immunizations Important?

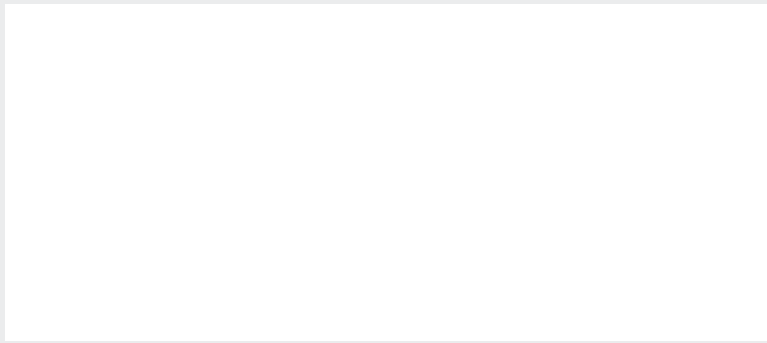

- **The most important** shots are given when your children are still babies to help them grow into healthy children.
- **Babies** need to get these shots before they are two years old to protect them from dangerous diseases.
- **Shots** are given to babies in several doses. It's the best way to help them fight diseases as they grow.
- **Remember,** shots help healthy babies and children stay healthy.
